

Department of Computer Science

CIE REPORT

The department takes an entry level examination for each academic year for all the odd semester students after one month of commencement of induction meeting. The examination is usually of 20 marks though the decisions are taken through meeting by members of the department. Students having marks above 15 as advance learner, above 10 as moderate learners and rest are considered as slow learners.

That categorisation and three term examinations (viva/written/class test) throughout the semester helps to keep track on the growth of the students learning behaviour as it can be noticed that students can grow from one category to another i.e. Ipsita Sarkar 3rd Semester, Sukanya Konar and Soma Mahato of 1st semester were found to be slow learner in the session 2019-2020 but they managed themselves a place among average learners in the next academic year session -2020-2021 in 5th semester and 2nd semester respectively.

According to that assessment, tutorial classes are taken for advanced learners and Remedial classes are taken for average and slow learner,. In tutorial classes, more advance thoughts on the topics are discussed. In Remedial classes usually specific portion is repeated in accordance with doubts of students. In both the classes new ideas are heedfully encouraged and students are supported with needful materials as well.
